# Cosmo's Space Facts!

The Sun is a star (it's a big ball of hot, glowing gas).

Earth is a planet... and it's always spinning, even when you can't feel it.

The Moon has craters because space rocks bonk into it (no wind or rain to erase them!).

Some “stars” you see are actually planets (they can look bright too!).

Astronauts float because they're in microgravity.

Rockets launch with powerful engines that push them up (like a super-mega “WHOOOSH!”).

Saturn has rings made of ice and rock.

A shooting star isn't a star—it's a tiny space rock burning up in the sky.

# Cosmo's Silly Space Story!

**Little kids:** circle answers. **Big kids:** write your own.

**Cosmo blasted off to (circle one):**

the Moon      Saturn      Donut Planet      Teddy Bear World

**He rode in a (circle one):**

spaceship      sock-ship      cupcake cruiser      rocket-car

**On the way, he saw a (circle one):**

shooting star      space whale      wiggly wormhole      moon made of cheese

**Cosmo felt (circle one):**

giggly      amazed      super brave      silly

**He met a (circle one):**

friendly alien      robot pal      space dragon      moon frog

**Together they found (circle one):**

a crystal      a mystery key      treasure      cosmic pizza

**Best part was (circle one):**

snacks      friends      zooming      being silly

**Bonus: Draw it below!**
